

REVERSE THE TREND SAVE OUR PEOPLE, SAVE OUR PLANET

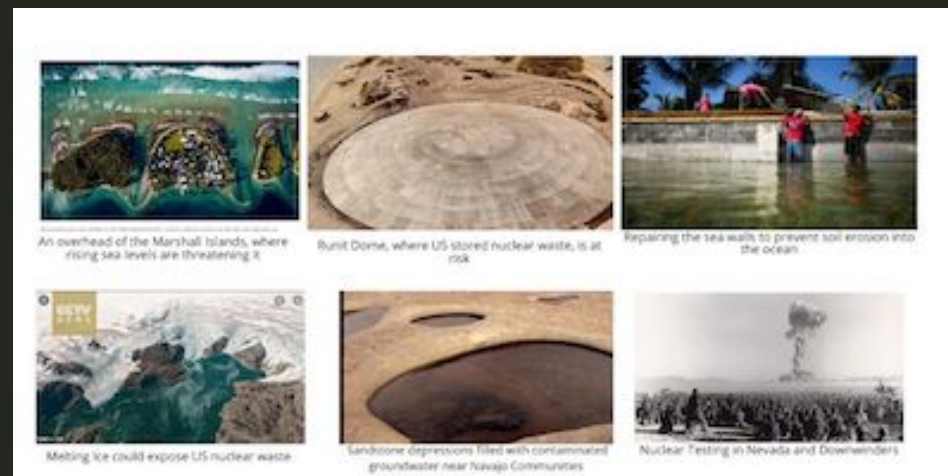

What's the Problem?

There is a great lack of awareness about the repercussions of climate change on indigenous communities near test sites and nuclear waste. Most leaders are also ignoring their legal obligations to tackle these issues.

Solution

We aim to engage with local networks and encourage youth activists to co-produce a docuseries consisting of 3-4 episodes to drive online awareness and engagement.

The episodes will cover the following geographic areas: Pacific Region, Arctic, North America, and Central Asia.

From Top Left to Bottom Right: Rising Sea Levels in the Marshall Islands, Runit Dome filled with US nuclear waste, Repairing the Sea Wall, Greenland, and Sandstone Depressions filled with radioactive water, and nuclear test

Impact

As a long-term impact, we will create a sustainable youth network. This youth network will allow youth to interact with one another and learn how to effectively engage in advocacy and activism.

The participants will also be invited to attend international meetings to engage and hold global leaders accountable for their actions.

Youth are feeling empowered to take on these challenges, but they require your financial assistance to make a difference.
